

Preface

Acknowledgments

Materials Research Society Symposium Proceedings

| | |
|--|--------|
| Influence of Imperfections on Effective Properties of Cellular Solids | p. 3 |
| Mechanical Properties of a Structural Polyurethane Foam and the Effect of Particulate Loading | p. 15 |
| Numerical Modeling of the Strength of Highly Porous Aerated Autoclaved Concrete | p. 21 |
| Modeling of Fatigue for Cellular Materials | p. 27 |
| Analysis of Deformation of Porous Metals | p. 33 |
| A Continuum Plasticity Model for the Constitutive Behavior of Foamed Metals | p. 39 |
| Elastic Properties of Porous Structural Ceramics Produced by Plasma Spraying | p. 45 |
| Reduction in Young's Modulus of Aluminum Foams Due to Cell Wall Curvature and Corrugation | p. 53 |
| Compressive, Tensile, and Shear Testing of Melt-Foamed Aluminum | p. 59 |
| Effects of Thermomechanical Processing on the Resulting Mechanical Properties of 6101 Aluminum Foam | p. 65 |
| Compressive Deformation and Yielding Mechanisms in Cellular Al Alloys Determined Using X-ray Tomography and Surface Strain Mapping | p. 71 |
| Shear Properties on Aluminum Metal Foams Prepared by the Melt Route | p. 83 |
| Bending Properties of Foamed Aluminum Panels and Sandwiches | p. 91 |
| High Cycle Fatigue Properties of Aluminum Foams | p. 97 |
| Strain Rate Effects in Porous Materials | p. 103 |
| The Effect of Parent Metal Properties on the Performance of Lattice Block Material | p. 109 |
| | |
| Production Methods for Metallic Foams | p. 121 |
| Aluminum Foam, "ALPORAS": The Production Process, Properties, and Applications | p. 133 |
| The Effect of Oxide Layers on Gas-Generating Hydride Particles During Production of Aluminum Foams | p. 139 |
| Investigation for the Selection of Foaming Agents to Produce Steel Foams | p. 145 |
| Complex Foamed Aluminum Parts as Permanent Cores in Aluminum Castings | p. 151 |
| Joining of Aluminum Structures With Aluminum Foams | p. 159 |
| Lyophilic Liquid Porosimetry and a New Liquid Autoporosimeter | p. 165 |
| Eddy-Current Characterization of Metal Foams | p. 171 |
| Applications for Silica-Based Aerogel Products on an Industrial Scale | p. 179 |
| Structural Graphitic Carbon Foams | p. 185 |
| Steel and Titanium Hollow Sphere Foams | p. 191 |
| Novel Hollow Powder Porous Structures | p. 205 |
| Fabrication and Properties of Syntactic Magnesium Foams | p. 211 |
| Porous Al Alloys by Local Melting and Diffusion of Metal Powders | p. 217 |
| Development and Scale-up of the Low-Density-Core Process for Ti-64 | p. 225 |
| Superplastic Foaming of Titanium and Ti-6Al-4V | p. 231 |
| Elastic Properties of Low Density Core (LDC) Ti-6Al-4V Sandwich Cores | p. 237 |
| In Situ Sensing of the Expansion of Low-Density-Core (LDC) Ti-6Al-4V Sandwich Structures | p. 243 |

| | |
|--|--------|
| Process Modeling of Ti-6Al-4V SPM Materials | p. 249 |
| The Influence of Internal Pore Pressure During Roll Forming of Structurally Porous Metals | p. 257 |
| Parameters of Construction for Applications of Metal Foams | p. 265 |
| Lightweight Products With Metal Foam - Properties and Methods of Processing | p. 271 |
| Formation of Ordered Gas-Solid Structures Via Solidification in Metal-Hydrogen Systems | p. 281 |
| GASAR Porous Metals Process Control | p. 291 |
| The Effect of GASAR Processing Parameters on Porosity and Properties in Aluminum Alloy | p. 297 |
| Characterization of Porous GASAR Aluminum | p. 303 |
| Metallographic Study of GASAR Porous Magnesium | p. 315 |
| Author Index | p. 321 |
| Subject Index | p. 323 |
