

## CONTENTS

### I BASIC CONCEPTS

<b>1</b>	<b>Introduction</b>	<b>3</b>
1.1	History and motivation	3
1.2	What is tomography?	7
1.2.1	Non-destructive techniques using simple projections	8
1.2.2	Non-destructive techniques using information beyond simple projection data	8
1.2.3	Destructive techniques	8
1.3	What is resolution?	9
1.4	Tomographic methods not further treated in this book	11
1.4.1	Positron emission tomography	11
1.4.2	Electrical impedance or resistance tomography	12
1.4.3	Electrical capacitance tomography	12
1.4.4	Magnetic resonance imaging	13
1.4.5	Seismic tomography	13
1.4.6	Tomographic imaging by sectional slicing	14
1.4.7	3D atom probe tomography	14
1.5	Summary	15
1.6	References	17
<b>2</b>	<b>Some mathematical concepts for tomographic reconstruction</b>	<b>19</b>
2.1	Foundations of reconstruction from projections	19
2.1.1	Notation, definitions, the reconstruction problem	19
2.1.2	Theoretical background to the solution of the reconstruction problem	20
2.2	Examples of reconstruction methods	23
2.2.1	Filtered backprojection	23
2.2.2	Algebraic reconstruction techniques	25
2.2.3	Discrete tomography	29
2.3	Some problems associated with the application of reconstruction algorithms	31
2.3.1	Resolution and sampling	31
2.3.2	Incomplete data	32
2.3.3	Beam hardening	33
2.4	Summary	34
2.5	References	34

<b>3 Visualization, processing and analysis of tomographic data</b>	37
3.1 Lattices, adjacency of lattice points, and images	37
3.1.1 Homogeneous lattices	38
3.1.2 Image data	39
3.1.3 Adjacency and Euler number	40
3.1.4 Connected components	45
3.2 Visualization	46
3.2.1 Volume rendering	46
3.2.2 Surface rendering	49
3.3 Processing of image data	52
3.3.1 Fourier transform	52
3.3.2 Morphological transforms	54
3.3.3 Geodesic morphological transforms	57
3.3.4 Linear filters	59
3.3.5 Non-linear filters	64
3.3.6 Distance transforms	69
3.3.7 Skeletonization	70
3.4 Segmentation	72
3.4.1 Binarization	72
3.4.2 Connected-component labelling	76
3.4.3 Watershed transform	78
3.4.4 Further segmentation methods	80
3.5 Analysis of image data	81
3.5.1 Features of connected components	82
3.5.2 Field features	86
3.5.3 Fluctuations	88
3.6 Modelling materials properties	94
3.6.1 Linear elasticity	95
3.6.2 Finite element method	96
3.7 References	100
<b>4 Radiation sources and interaction of radiation with matter</b>	107
4.1 General definitions	107
4.1.1 Scattering from a single target	108
4.1.2 Scattering from an ensemble of targets	110
4.1.3 Absorption and attenuation coefficients	111
4.1.4 Refraction and reflection	114
4.2 Generation of X-rays and their interaction with matter	114
4.2.1 X-ray sources	114
4.2.2 X-ray interactions: overview	119
4.2.3 Photoelectric effect	120
4.2.4 Elastic scattering	122
4.2.5 Inelastic scattering	122
4.2.6 Total interaction	123

4.2.7	Refraction	123
4.3	Generation of electrons and their interaction with matter	123
4.3.1	Electron sources	125
4.3.2	Electron interactions: overview	125
4.3.3	Elastic scattering	126
4.3.4	Inelastic scattering	128
4.4	Generation of neutrons and their interaction with matter	129
4.4.1	Neutron sources	129
4.4.2	Neutron interactions: overview	132
4.4.3	Nuclear scattering	132
4.4.4	Magnetic interactions	135
4.4.5	Nuclear absorption	135
4.4.6	Total attenuation	135
4.4.7	Refraction	136
4.5	Comparison of interactions	136
4.6	Summary	137
4.7	References	137

## II SYNCHROTRON X-RAY TOMOGRAPHY

5	<b>Synchrotron X-ray absorption tomography</b>	141
5.1	Synchrotron radiation for tomography	141
5.2	Principles of synchrotron X-ray tomography	142
5.3	Data reconstruction	144
5.4	Image artefacts	145
5.4.1	Ring artefacts	145
5.4.2	Image noise	146
5.4.3	Edge artefacts	146
5.4.4	Motion artefacts	147
5.4.5	Beam hardening	148
5.4.6	Metal artefacts	149
5.4.7	Centring errors of the rotation axis	149
5.5	Applications and 3D image analysis	149
5.5.1	Metal-foam stabilization by silicon carbide particles	149
5.5.2	Discharge processes in alkaline cells	153
5.5.3	Ceramic foams as artificial bone marrow	155
5.6	Summary	157
5.7	References	158
6	<b>Phase-contrast and holographic tomography</b>	161
6.1	Propagation of light and phase contrast	161
6.2	Interferometry for phase tomography	163
6.2.1	Bonse–Hart interferometry	163
6.3	Differential interferometry	164
6.4	Zernike phase contrast for tomography	165

6.5	Diffraction-enhanced imaging	165
6.6	Propagation-based phase tomography	167
6.6.1	Transport of intensity approaches	168
6.6.2	Holotomography	171
6.6.3	Integrated approach	173
6.7	Coherent diffractive imaging	173
6.8	Polychromatic phase imaging	175
6.9	Summary	176
6.10	References	177
<b>7</b>	<b>Tomography using magnifying optics</b>	181
7.1	Fresnel zone-plate microscopy and microtomography	183
7.1.1	Fresnel zone-plate for hard X-rays	183
7.1.2	Optical system and imaging properties of FZP microscope	187
7.1.3	Microtomography with Fresnel zone-plate objectives	194
7.1.4	Applications to materials science and engineering	197
7.2	Hard X-ray microscopy and tomography based on refractive and reflective optics	202
7.2.1	Refraction and total external reflection of hard X-rays	202
7.2.2	Tomography based on hard X-ray full-field microscopy	204
7.2.3	Tomography using a hard X-ray microscope based on magnified projection imaging	206
7.3	Summary	207
7.4	References	208
<b>8</b>	<b>Scanning tomography</b>	211
8.1	Fluorescence tomography	211
8.1.1	History	211
8.1.2	Description of fluorescence tomography signal and relevant parameters	213
8.1.3	Reconstruction algorithm	220
8.1.4	3D fluorescence tomography helical scan	223
8.1.5	Instrumental setup	224
8.1.6	Time-saving strategies in fluorescence tomography	226
8.1.7	Applications	231
8.2	X-ray absorption and small-angle scattering tomographies	235
8.2.1	Introduction	235
8.2.2	Tomographic imaging by absorption spectroscopy	236
8.2.3	Tomographic imaging by small-angle X-ray scattering	240
8.3	Summary	243
8.4	References	244

<b>9 Three-dimensional X-ray diffraction</b>	249
9.1 Basic setup and strategy	250
9.2 Indexing and characterization of average properties of each grain	253
9.2.1 Polycrystal indexing	253
9.2.2 A statistical description of dynamics	255
9.2.3 Applications	255
9.3 Mapping of grains within undeformed specimens	258
9.3.1 Forward projection	260
9.3.2 Algebraic solution	260
9.3.3 Monte-Carlo-based reconstruction	262
9.3.4 Applications	263
9.4 Mapping of orientations within deformed specimens	264
9.4.1 Discrete tomography algorithm for moderately deformed specimens	265
9.4.2 Heavily deformed materials	267
9.5 Combining 3DXRD and tomography	267
9.6 3DXRD microscopes	269
9.7 Geometric principles	269
9.7.1 Diffraction geometry	270
9.7.2 Representation of crystallographic orientation	271
9.8 Summary and outlook	273
9.9 References	273
<b>10 Detectors for synchrotron tomography</b>	277
10.1 Scintillation mechanism	278
10.2 Spatial resolution and detective quantum efficiency	279
10.3 Powder screens	283
10.4 Crystal converter screens	284
10.4.1 Essential properties of crystal converter screens	285
10.4.2 Bulk converter screens	285
10.4.3 Composed converter screens	287
10.4.4 Polycrystalline scintillators	288
10.5 Optical coupling	289
10.5.1 Lens coupling: finite-focused versus infinity-focused systems	291
10.5.2 Fibre-optical coupling	293
10.6 Readout based on CCD cameras	293
10.6.1 Categories of CCD cameras	294
10.6.2 Noise factors in CCD cameras	296
10.6.3 Readout schemes of CCD cameras	296
10.7 Review of potential solutions for large field of view detector	297
10.7.1 a-Si-based flat panels	297
10.7.2 CMOS photodiode arrays	298

10.8 Summary	299
10.9 References	300
 III ELECTRON TOMOGRAPHY	
<b>11 Fundamentals of electron tomography</b>	305
11.1 Introduction	305
11.2 Tomography using the electron microscope	306
11.2.1 The projection requirement	306
11.2.2 Acquisition	307
11.3 Alignment and reconstruction	310
11.3.1 Alignment of tilt series	310
11.3.2 Alignment by cross-correlation	311
11.3.3 Alignment by tracking of fiducial markers	312
11.3.4 Tilt-axis alignment without fiducial markers	312
11.3.5 Reconstruction	315
11.3.6 Segmentation	317
11.3.7 Quantitative analysis	318
11.4 Bright-field and dark-field electron tomography	318
11.4.1 Bright-field tomography	318
11.4.2 Dark-field (DF) tomography	319
11.5 HAADF STEM tomography	320
11.6 EFTEM tomography	324
11.7 Unconventional modes for electron tomography	326
11.7.1 Energy-dispersive X-ray (EDX) mapping	326
11.7.2 Holographic tomography	327
11.7.3 Confocal STEM	328
11.7.4 Atomic-resolution tomography	328
11.8 References	329
<b>12 Applications of electron tomography</b>	335
12.1 Applications in materials research	335
12.1.1 Heterogeneous catalysts	335
12.1.2 Polymers	336
12.1.3 Nanotubes and semiconductor nanostructures	338
12.1.4 Biomaterials	342
12.1.5 Metallic nanostructures	346
12.1.6 3D electrostatic potentials	348
12.1.7 3D visualization of defects by dark-field tomography	348
12.2 Applications in semiconductor industry	350
12.2.1 Electron tomography in semiconductor manufacturing	350
12.2.2 Technical requirements and methodical problems	351
12.2.3 Application examples	357
12.2.4 Future prospects	367
12.3 References	368

**IV NEUTRON TOMOGRAPHY**

<b>13 Neutron absorption tomography</b>	375
13.1 Interaction of neutron radiation with matter and comparison to X-rays	375
13.2 Specifics of neutron tomography	378
13.2.1 Principle	378
13.2.2 Neutron sources and beam characteristics	380
13.2.3 Geometry (beamline design)	382
13.2.4 Detectors	384
13.2.5 Sample stage	391
13.2.6 Shielding	391
13.2.7 Data acquisition and processing	392
13.3 Limitations in neutron tomography	394
13.3.1 Temporal and spatial resolution	394
13.3.2 Sample activation	395
13.4 Selected applications and experimental options	396
13.4.1 Conventional tomography	396
13.4.2 Simultaneous application of neutron and X-ray tomography	403
13.4.3 Energy-selective tomography	403
13.5 Summary	406
13.6 References	406
<b>14 Neutron phase-contrast and polarized neutron tomography</b>	409
14.1 Theory of phase-contrast imaging	410
14.2 Experimental techniques for phase-contrast imaging	412
14.2.1 Interferometric technique	412
14.2.2 Free-path propagation technique	414
14.2.3 Differential phase contrast	417
14.3 Imaging with polarized neutrons	419
14.4 Conclusions and outlook	422
14.5 References	422
<b>15 Neutron-refraction and small-angle scattering tomography</b>	425
15.1 Refraction tomography	426
15.2 Small-angle scattering tomography	428
15.3 Experimental results: refraction tomography	429
15.4 Experimental results: small-angle tomography	437
15.5 References	440

<b>A Facilities for tomography</b>	441
A.1 Synchrotron tomography	441
A.2 Neutron tomography	441
A.3 Electron tomography	442
A.4 References	447
<b>B Examples on CD-ROM</b>	449
B.1 References	451
<b>Index</b>	453

## AUTHORS

**Prof Dr John Banhart**  
Hahn-Meitner-Institut (HMI)  
Glienicker Strasse 100  
14109 Berlin  
Germany

**Dr Pierre Bleuet**  
European Synchrotron Radiation Facility (ESRF)  
6 rue Jules Horowitz  
38043 Grenoble  
France

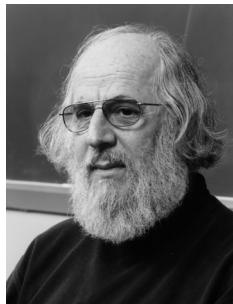

**Dr Bruno Golosio**  
Struttura Dipartimentale di Matematica e Fisica  
Universita' di Sassari  
via Vienna, 2  
07100 Sassari  
Italy

**Dr Heinz Graafsma**  
Deutsches Elektronen Synchrotron (Hasylab)  
Notkestr. 85  
22607 Hamburg  
Germany

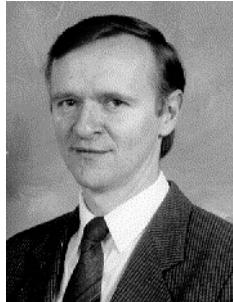

**Dr Astrid Haibel**  
Deutsches Elektronen Synchrotron (Hasylab)  
Notkestr. 85  
22607 Hamburg  
Germany

**Prof Gabor T Herman, PhD**  
Distinguished Professor of Computer Science  
The Graduate Center  
City University of New York  
USA

**Dr Nikolay Kardjilov**  
Hahn-Meitner-Institut (HMI)  
Glienicker Strasse 100  
14109 Berlin  
Germany

**Prof Dr Attila Kuba**  
Image Processing and Computer Graphics  
University of Szeged  
Hungary

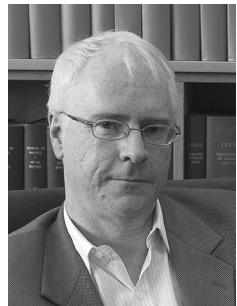

**Dr Eberhard H Lehmann**  
Spallation Neutron Source Division  
Paul Scherrer Institut (PSI)  
5232 Villigen PSI  
Switzerland

**Dr Thierry Martin**  
Instrument Support Group  
Detector Systems Unit  
European Synchrotron Radiation Facility (ESRF)  
38043 Grenoble  
France

**Dr Paul A Midgley**  
Department of Materials Science and Metallurgy  
University of Cambridge  
Pembroke Street  
Cambridge CB2 3QZ  
UK

**Prof Dr Keith A Nugent**  
School of Physics  
The University of Melbourne  
Melbourne, Victoria, 3010  
Australia

**Prof Dr Joachim Ohser**  
University of Applied Sciences  
Schfferstrasse 3  
64295 Darmstadt  
Germany

**Dr Andrew G Peele**  
Department of Physics  
La Trobe University  
Bundoora, Victoria, 3086  
Australia

**Prof Dr Henning Friis Poulsen**  
Risø National Laboratory  
4000 Roskilde  
Denmark

**Dr Alexander Rack**  
Forschungszentrum Karlsruhe  
Institute for Synchrotron Radiation – ANKA  
76344 Eggenstein-Leopoldshafen  
Germany

**Dr Katja Schladitz**

Fraunhofer Institut für Techno- und Wirtschaftsmathematik (ITWM)  
Fraunhofer-Platz 1  
67663 Kaiserslautern  
Germany

**Prof Dr Christian Schroer**

Institut für Strukturphysik  
Technische Universität Dresden  
01062 Dresden  
Germany

**Prof Dr Alexandre Simionovici**

Observatoire des Sciences de l'Univers de Grenoble  
Lab. Géophysique Interne & Tectonophysique  
UMR5559, Maison des Geosciences, BP 53  
38041 Grenoble Cedex 9  
France

**Dr Heiko Stegmann**

Carl Zeiss NTS Innovationslabor Dresden  
Manfred von Ardenne-Ring 20  
01099 Dresden  
Germany

**Dr Yoshio Suzuki**  
Japan Synchrotron Radiation Research Institute  
SPring-8  
Sayo, Hyogo, 679-5198  
Japan

**Prof Dr Hiroyuki Toda**  
Department of Production Systems Engineering  
Toyohashi University of Technology  
Hibarigaoka, Tempaku, Toyohashi, Aichi, 441-8580  
Japan

**Prof Dr Wolfgang Treimer**  
University of Applied Sciences (HTWK)  
Department II: Physics, Mathematics, Chemistry  
Luxemburger Strae 10  
13353 Berlin  
Germany

**Dr Matthew Weyland**  
Department of Materials Engineering  
Monash University  
Victoria, 3800  
Australia
